The FPEC Vacuum Feed Hopper System is built to meet your requirements, whether tall and narrow or short and wide. Because of fast, efficient loading of vacuum tumblers and mixers, marination and cures are loaded into processing machinery without spillage. One hopper may load numerous machines and pre-loading of products can be done while the previous batch is being processed. The Vacuum Feed Hopper System even has a removable product plunger valve for cleaning. Whatever your loading needs, the Vacuum Feed Hopper is the answer.

FPEC—A Company Built on Trust.
